

COMMAND AND CONTROL SYSTEMS

CALL

- 4-channel receiver to control the automation system via mobile phone (text or call), along with radio control.
 - It can control various types of systems, such as alarm systems, garden irrigation, etc.
 - The system is operated by entering a certain number of (telephone) users in the receiver's SIM card. Each user will then be able to control all the functions for which it has been programmed.
 - Associating the number of possible users, the settings associated with the telephone numbers (saving/deleting/editing the settings) and saving the rolling code transmitters may be done without having to access the control panel and does not require the survey of an operator, as they may be done with a mobile phone
 - CALL allows to associate a function that can be activated with a missed call (no charges) to one of the four channels. So the activation of a control by a user is made possible by means of a simple call free of charge. (for instance opening the gate, switching on the lights, the alarm system).
 - The built-in display allows to customise the function of each relay: monostable, bistable or timed up to 600 seconds.
- If the alarm system is associated with one of the four channels, CALL is designed to call a pre-set user, in the event of a sudden activation of the alarm itself.
- The alarm system can be deactivated by a user authorised to access this function via mobile phone.
 - The input for buffer battery with 12 Vdc (optional) with integrated recharge control guarantees operation of the receiver even during a power cut
